I currently benefit from XM Satellite Radio in both my vehicles as well as my office. This form of broadcast has given our family a broad variety of quality programming for our family. We can enjoy the kids channels without worry of what will be said over the air. We can enjoy the story channels along with the many other choices. We are currently planning a trip to the west coast and we are able to get weather forecasts for the areas we will be visiting.

I would urge the FCC to reject the NAB's petition 04-160 and support XM's ability to provide quality needed programming including local information.
